OpenGridFM – Incubation stage request

June 2026

LF ENERGY

LF ENERGY GridFM

Foundation models for power grids

To be considered for the Incubation Stage, the project must meet the following requirements:

- Have achieved and maintained an [OpenSSF Best Practices Badge at the 'Passing' level](#).

gridfm-datakit

docs available | coverage 76% | openssf best practices passing | openssf scorecard 6.4 | python 3.10 – 3.12 | license Apache 2.0

GridFM DataKit

GridFM DataKit (`gridfm-datakit`) is a Python library for generating realistic, diverse, and scalable synthetic datasets for power flow (PF) and optimal power flow (OPF) machine learning solvers. It unifies state-of-the-art methods for perturbing loads, generator dispatches, network topologies, and branch parameters, addressing limitations of existing data generation libraries.

gridfm-graphkit

DOI 10.5281/zenodo.20704614 | docs available | coverage 83% | openssf best practices passing | openssf scorecard 6.7 | python 3.10 – 3.12 | license Apache 2.0

This library is brought to you by the GridFM team to train, finetune and interact with a foundation model for the electric power grid.

LF ENERGY

LF ENERGY GridFM

Foundation models for power grids

To be considered for the Incubation Stage, the project must meet the following requirements:

- Have an open and documented technical governance, including:
  - A README file in each code repository, welcoming new community members to the project and explaining why the project is useful and how to get started (follow the guidelines at the README checklist to create an excellent README file).
  - A GOVERNANCE file that documents the project's technical governance (GOVERNACE.md template).
  - All current Technical Steering Committee members specified in the 'Technical Steering Committee (TSC)' committee in LFX Project Control Center (details on how this should be set up are here).
  - A CODEOWNERS or COMMITTERS file to define individuals or teams that are responsible for code in a repository, as well as documenting current project owners and current and emeritus committers (COMMITTERS.csv template)

gridfm-datakit:

- CODE_OF_CONDUCT.md
- COMMITTERS.csv
- CONTRIBUTING.md
- GOVERNANCE.md
- LICENSE
- MANIFEST.in
- README.md
- RELEASE.md
- SECURITY.md
- SUPPORT.md

LF ENERGY GridFM

Foundation models for power grids

To be considered for the Incubation Stage, the project must meet the following requirements:

- A documented roadmap that describes what the project intends to do and not do for at least the next year

TOC of the draft version of the updated GridFM roadmap

Contents

LF ENERGY

An updated roadmap is in the works and will be published on arxiv this year.

LF ENERGY GridFM

Foundation models for power grids

To be considered for the Incubation Stage, the project must meet the following requirements:

- Community and contributor growth assessment using the data from LFX Insights. Specific metrics that will be reviewed are.
    - Current number of contributors, committers, and different organizations contributing to the project.
    - Flow of commits / merged contributions

LF ENERGY

LF ENERGY GridFM

Foundation models for power grids

To be considered for the Incubation Stage, the project must meet the following requirements:

- A credible plan for developing a thriving user community, particularly expanding the number of committers and contributors to the project.

3rd GridFM workshop – 11/13th Feb. 2025– Argonne Ntl Lab., USA
100+ people

4th GridFM workshop - 8/9th Sept 2025– E-On Energy Research Center, Aachen, Germany
130+ people

5th GridFM workshop - 17/19th March 2026– Harvard John A. Paulson School of Engineering and Applied Sciences, USA
200+ people

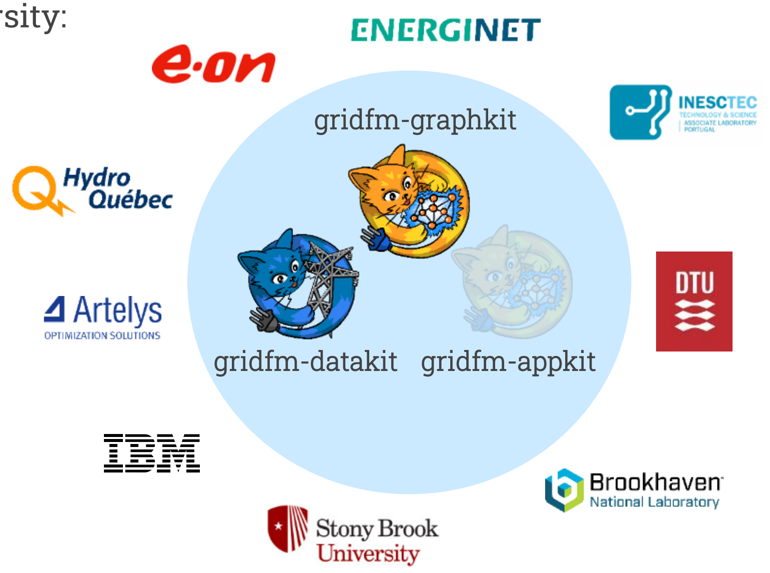
LF ENERGY GridFM

Foundation models for power grids

To be considered for the Incubation Stage, the project must meet the following requirements:

- An outline of the plan for the project to complete the requirements for the Early Adoption stage.

- Increase organizational diversity:



Early talks with: NVidia, Microsoft, Globallogic/Hitachi.

- Production or planned production use of the project by at least two independent end users:
  - Accelerated contingency screening, node ranking, voltage control and cybersecurity applications are being considered by multiple users.
  - The gridfm-appkit repos should be created this year.
