2026 Annual Review for GEISA

LF ENERGY

LFENERGY

GEISA

Grid Edge Interoperability & Security Alliance

Description

Open specification that lets utilities run isolated applications from many vendors on a mixed fleet of smart meters and grid devices, all managed from a single system.

GEISA

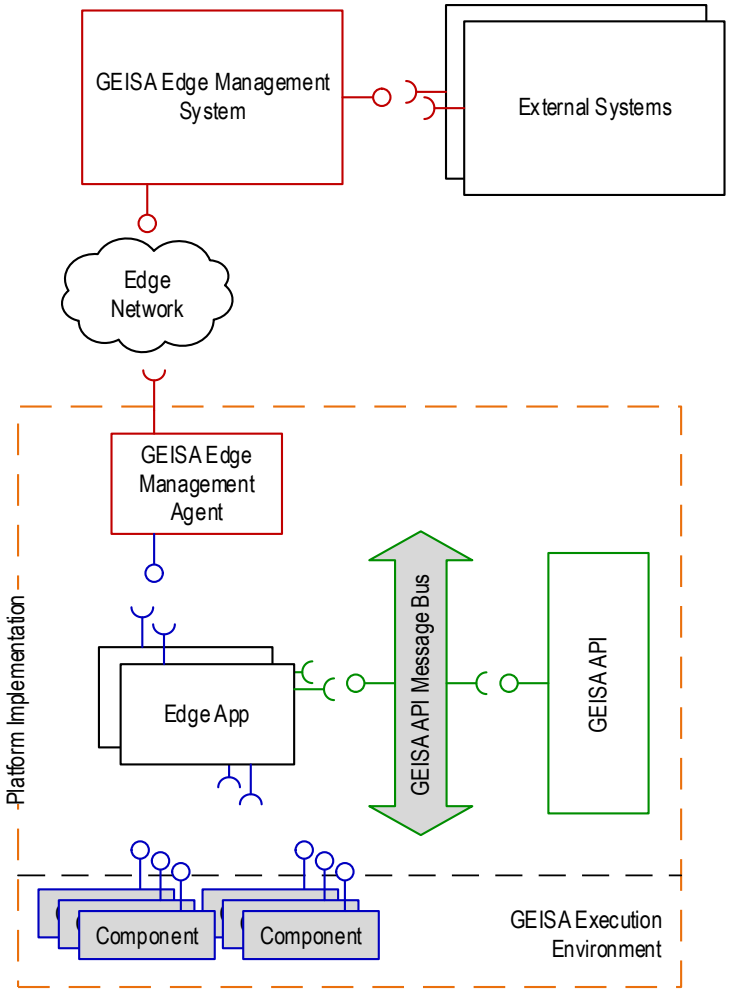

Standardizing & securing computing environments at the very edge of the Grid

At its core, GEISA is a specification, selecting open-source technologies to provide a consistent secure edge environment that utilities can deploy, platform vendors can provide, and software vendors can write to.

The GEISA specification, being created under the Community Specification License, has four pillars:

- Application and Device Management
- Application Programming Interface
- Linux Execution Environment
- Virtual Execution Environment

The GEISA conformance test framework is being built out under the Apache License to test compliance with the specification.

LF ENERGY

Organizations Contributing*

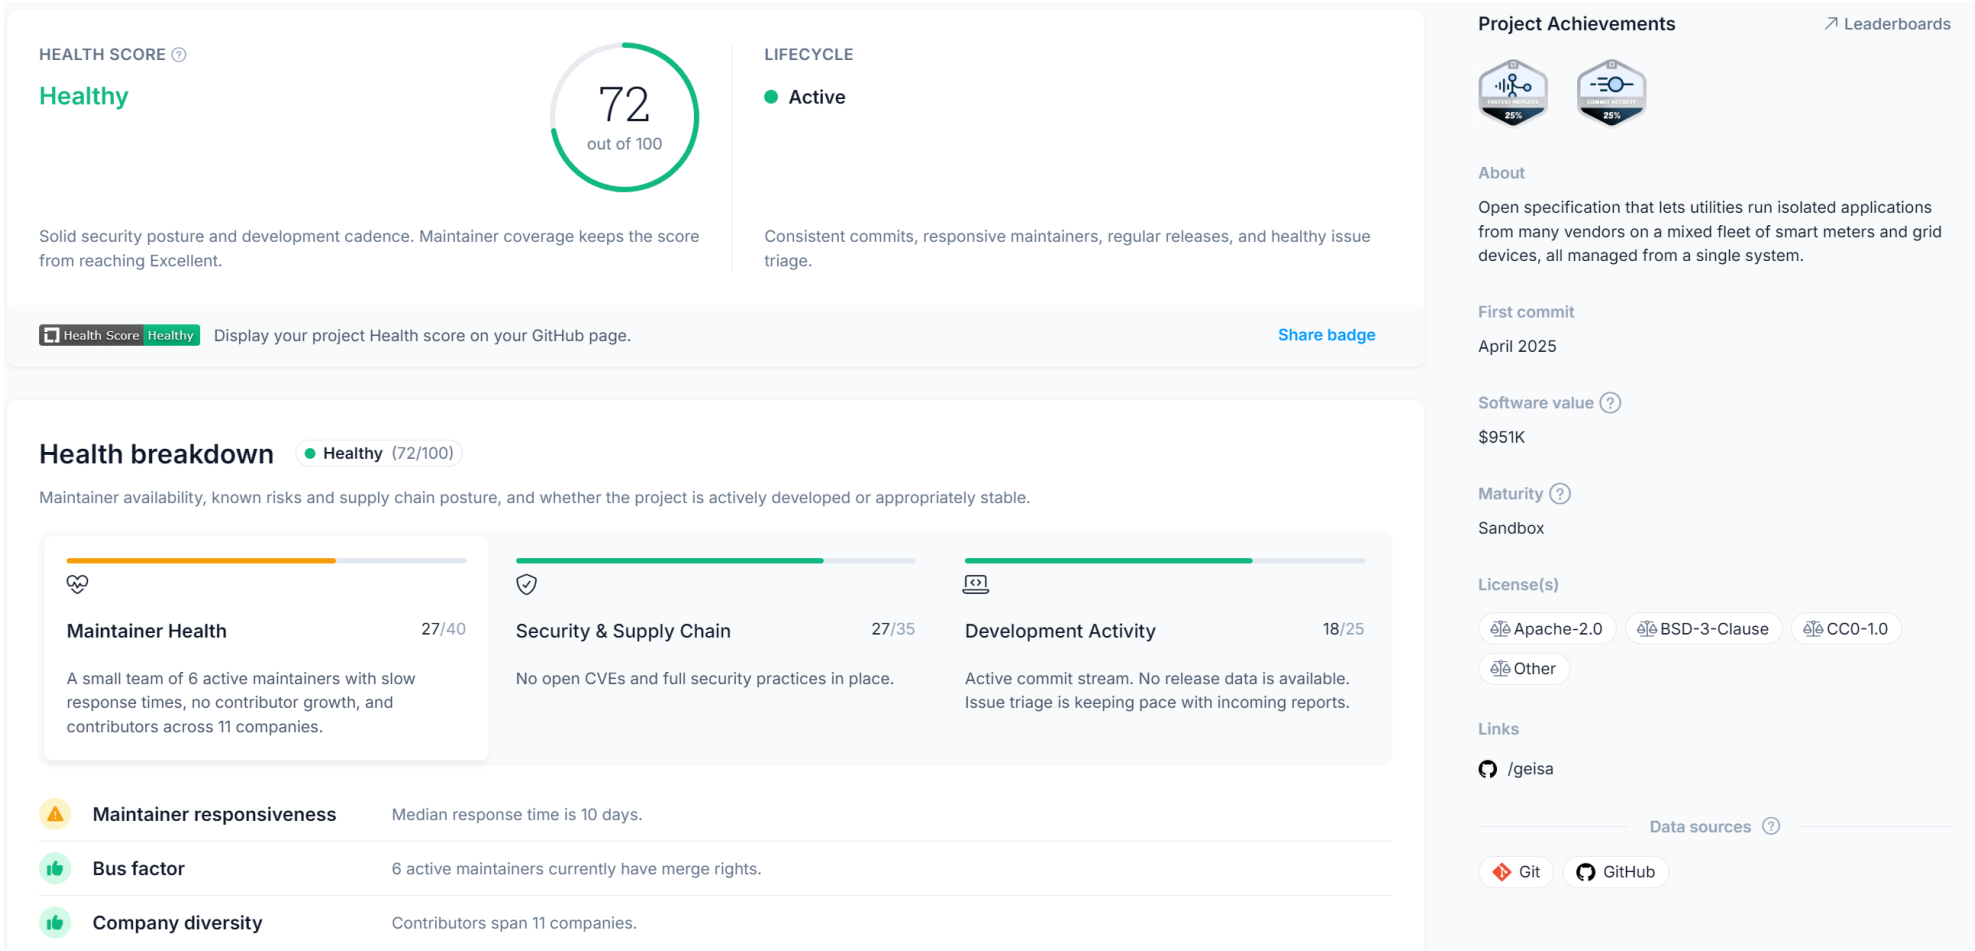

LFENERGY

*As a specification, we take contributions verbally, as well as through a formal commenting processes

Key Achievements in the past year

- One face-to-face
- 1,326 commits & 233 pull requests 2026 YTD, versus 681 & 35 in 2025
- Released 0.9-draft for review
- Demos at LF Energy Europe Summit
- Spec is now 275 pages, plus schemas & examples, versus 61 in 2025
- Finalizing 1.0-draft for review

LF ENERGY

Areas the project could use help on

- Third party review of security materials in the spec
- Certification program

Feedback on working with LF Energy

- Project evaluation criteria is development focused
  - Best practices badges
  - Contribution expectations
