

Annual Review for Grid eXchange Fabric

Maarten Mulder & Robert Tusveld - Alliander

Grid eXchange Fabric (GXF)

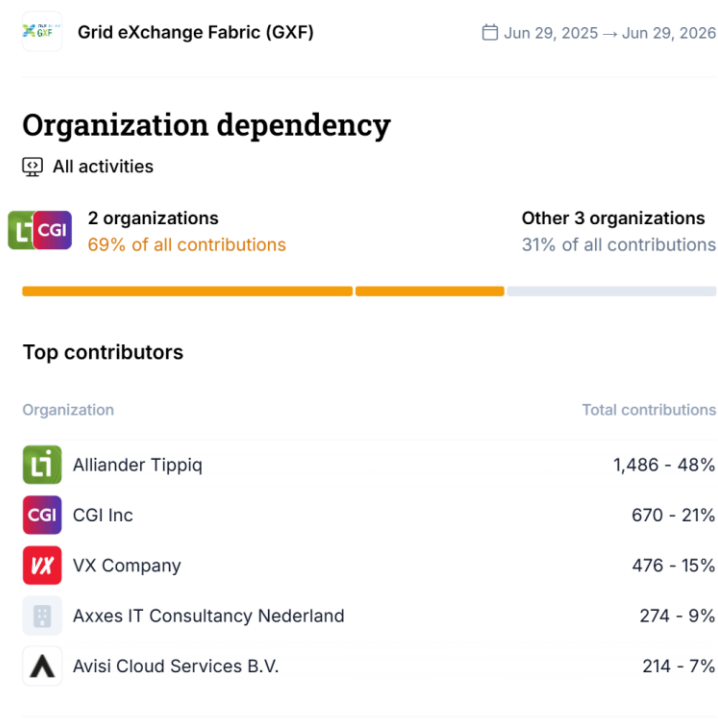

- Open-source platform for monitoring and control of field assets in the public space.
- Delivers scalability, high availability, security, and vendor independence.
- Proven in smart metering, public lighting, microgrids, and distribution automation.
- Built on open standards and driven by an open community.
- Enables innovation, flexibility, and long-term sustainability without vendor lock-in.

Mission: The platform to connect with any digital device to collect data and support functions.

Scope: To communicate with digital devices for example in the business-critical security zone.

Contributions

Organizations contributing and/or using in
production

Key Achievements in the past year

PRODUCTION IMPACT

7,000+

Low voltage measurement devices in production

6,000,000+

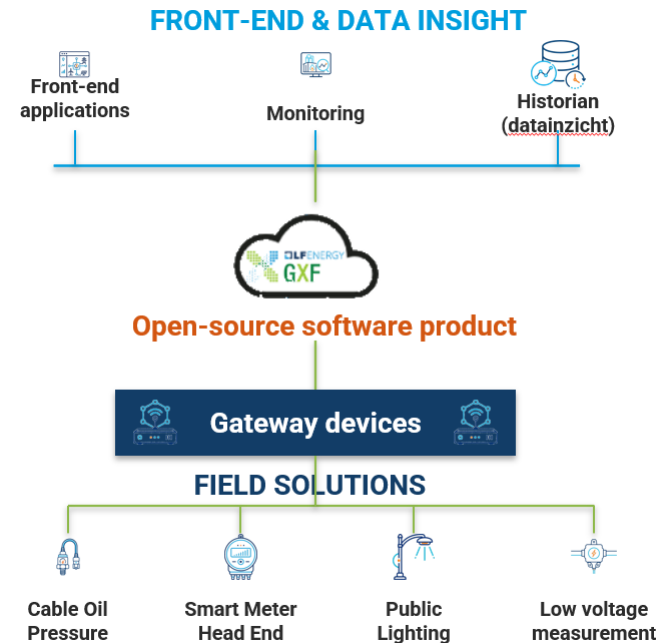

Smart Meter Head End devices in production

22,000+

Public Lighting devices in production
CI/CD-ready and container based

Next year

Cable Oil Pressure: integrated battery-powered device production starts

Early Adoption > Emeritus

- GXF has reached the end of its lifecycle in its current form.
- GXF has delivered proven, stable and reliable value to Alliander over many years.
- Wider adoption remained limited due to platform complexity, an aging architecture, and closed-source frontend solutions.
- GXF laid the groundwork for and inspired a new generation of successful open-source initiatives within Alliander.
- Existing use cases will continue to be supported through a new, simplified modular architecture.
- Current use cases will be preserved and further evolved through a simplified, modular architecture.
- We remain committed to collaborating with the LF Energy community where common industry needs align, with future collaboration expected to focus more on reusable modules and components than on a single end-to-end platform.
- Our belief in the power of open source remains unchanged, and we see it as a key driver for innovation and sector-wide collaboration.

Areas the project could use help on

- If the TAC approves the move to the Emeritus state Please help us with the steps needed to transition the project to Emeritus.

Feedback on working with LF Energy

- While this chapter is coming to an end, we hope to re-engage with LF Energy in the future once our new initiative has gained momentum.
- A special thank you to all 151 contributors for their support and contributions.
