

Technical Advisory Council (TAC) Meeting

08 September 2026

DLFENERGY

Meeting information

- Meeting to begin at 5:00 pm Central European Time
- Join the meeting at the link in your calendar in [LFX Individual Dashboard](#)
- Any problems with connectivity, you can contact John Mertic from the Linux Foundation at +1 234-738-4571 or Yarille Ortiz at +1 585-967-3585
- Previous TAC Meeting notes, deck, and recording, at <https://tac.lfenergy.org/meetings/>

Antitrust Policy Notice

Linux Foundation meetings involve participation by industry competitors, and it is the intention of the Linux Foundation to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas, and be aware of, and not participate in, any activities that are prohibited under applicable US state, federal or foreign antitrust and competition laws.

Examples of types of actions that are prohibited at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy available at linuxfoundation.org/antitrust-policy. If you have questions about these matters, please contact your company counsel, or if you are a member of the Linux Foundation, feel free to contact Andrew Updegrove of the firm of Gesmer Updegrove LLP, which provides legal counsel to the Linux Foundation.

Agenda

All Times in Central European Time Zone

- 5:00 pm - 5:10 pm - Opening and General Updates
 - TAC member updates and annual review date reminders
 - Project Pipeline
 - TAC Chair/Vice Chair Election Update
 - Speakers from other LF projects on community building ([#350](#))
- 5:10 pm - 5:15 pm - EU Cyber Resilience Act [#895](#)
- 5:15 pm - 5:30 pm - OneNet Framework Review/Discussion [#112](#)
- 5:30 pm - 5:45 pm - Annual Review- OperatorFabric [#71](#)
- 5:45 pm - 6:00 pm - Annual Review- Battery Data Alliance [#57](#)
- 6:00 pm - 6:15 pm - Annual Review- Power Stability Wide Area Monitoring Protection (p-SWAMP) [#585](#)
- 6:15 pm - 6:25 pm - Marketing and PR Updates
- 6:25 pm - 6:30 pm - Closing and Next Meeting

TAC Meeting Schedule 2026

The TAC meetings are monthly, on the second Tuesday of the month at 8:00am US Pacific Time/11:00am US Eastern Time unless otherwise noted.

- ~~— January 13~~
- ~~— February 10~~
- ~~— March 10~~
- ~~— April 14~~
- ~~— May 12~~
- ~~— June 9~~
- ~~— July 21 (rescheduled from 14)~~
- ~~— August 11 cancelled~~
- ~~— September 8~~
- **September 14 joint Board and TAC meeting at LF Energy Summit**
- October 13
- November 10
- December 8

Project and Working Group Leads

Name	Chair
AINETUS	Ricardo Bessa
Arras	Alyona Teyber
Battery Data Alliance	Gabe Hege
CitrineOS	Thana Paris
CityLearn	Zoltan Nagy
CoMPAS	Sander Jansen
Connected Data Specification - Customer Data Working Group (CDS WG3)	Daniel Roesler
Connected Data Specification - Power Systems Data Working Group (CDS WG2)	Stephen Suffian
Connected Data Specification - Registration Working Group (CDS WG1)	Daniel Roesler
covXtreme	Sachin Bhakar
CUPID (Controllable Unit Protocol Interface for DER)	Alexandre Lucas
Dynawo	Marco Chiaramello
EnerGNN	Balthazar Donon
EVerest	Marco Möller
FIDOPower	Alyona Teyber
FlexMeasures	Nicolas Höning
Grid Edge Interoperability & Security Alliance (GEISA)	Michael Stuber, Richard Lam
Grid Vantage	Alyona Teyber
Grid2Op	Benjamin Donnot

Hyphae	Arla Barnes
LF Energy RegistryOS	Casey Martinez
LF Energy Semantic Energy Framework (LFE-SEF)	Barry Nouwt
NODE Collective	Deandrea Salvador
OpenDSM	Travis Sikes
OpenGridFM	François Mirallès
OpenLEADR	Hugo Van De Pol
OpenSTEF	Daan Van Es
OpenSynth	Gus Chadney
OperatorFabric	Frédéric Didier
ORES (Open Renewal Energy Systems)	Chris Xie
Power Grid Model	Peter Salemink
Power Stability Wide Area Monitoring Protection (p-SWAMP)	Kjell Petter Myhren
PowSyBL	Sophie Frasnado
Real Time Data Ingestion Platform (RTDIP)	Chloe Ching
RTC-Tools	Jesús Andrés Rodríguez Sarasty
SC Decarbonisation Hub	Sachin Bhakar
SEAPATH	Eloi Bail
Shapeshifter	Robben Riksen
Smart HEMS Benchmark	Xiaoke Yang
SOGNO	Antonello Monti
TROLIE	Christopher Atkins
Utility Rate Plan Exchange	Klaartje De Schepper

TAC Resources

- TAC Website - <https://tac.lfenergy.org>
 - Contains all the TAC policies and meeting materials, as well as guides to using the various LF Energy tools
- TAC Overview - https://github.com/lf-energy/foundation/blob/main/overview_deck/LF%20Energy%20TAC%20Overview.pdf
 - Guide for TAC members on their role and how to navigate LF Energy
- Project Resource Request form - https://tac.lfenergy.org/tools/resource_request.html.

Questions/feedback - let us know!

The image shows a screenshot of the LF Energy Foundation TAC website on the left and a presentation slide on the right. The website has a header with the LF ENERGY logo, a search bar, and a link to 'Need help or have a question? Contact us here'. A sidebar menu lists: Home, Getting Involved, Processes, Meetings, Programs, Tools, Resources, and Code of Conduct. The main content area is titled 'LF Energy Foundation TAC' and describes the role of the Technical Advisory Committee (TAC) as defined in the Directed Fund Charter. It lists several responsibilities: coordinating collaboration among Technical Projects, making recommendations to the Budget Committee, electing a chairperson, taking meeting minutes, and creating/amending project lifecycle procedures. The presentation slide on the right is titled 'Technical Advisory Council (TAC) Overview' and dated 'December 2024'. It features the LF ENERGY logo and a page number '1' in the bottom right corner.

LF Energy Foundation TAC

Per the [Directed Fund Charter](#), the role of the Technical Advisory Committee (TAC) is to facilitate communication and collaboration among the Technical Projects. The TAC will be responsible for:

- Coordinating collaboration among Technical Projects, including development of an overall technical vision for the community;
- Making recommendations to the Budget Committee of resource priorities for Technical Projects;
- Electing annually a chairperson to preside over meetings, set the agenda for meetings, ensure meeting minutes are taken and who will also serve on the Governing Board as the TAC's representative (the "TAC Representative");
- Creating, maintaining and amending project lifecycle procedures and processes, subject to the

SIG Meeting Schedule for September

All SIG meetings can be found on the LF Energy calendar (calendar.lfenergy.org) as well as the SIG Calendar (sigcalendar.lfenergy.org)

Days/times listed are US Eastern Time

→ **SIG Leaders - share any updates for your SIGs**

The screenshot displays a web-based calendar interface for September 2026. At the top, there are navigation buttons: 'iCal', 'Today', and arrows for navigating between months. The current month is 'September 2026'. To the right, there are view toggle buttons: 'Day', '4 Days', 'Week', 'Month', and 'List' (which is currently selected). The calendar grid shows 'Wednesday 23' with a meeting listed from '10:00am - 11:00am'. The meeting is titled 'Edge Interoperability and Flexibility SIG Monthly Meeting' and is marked with a blue dot.

Project Pipeline

<https://github.com/orgs/lf-energy/projects/2/views/5>

Newly proposed

- [LayerATDT \(#906\)](#) is an open-source decision-support engine (Python/Streamlit) for the design of coordination and transaction mechanisms in local energy communities.
 - In review by TAC Chair/Vice Chair before proceeding with LF Onboarding

In LF Onboarding

- [EDDIE \(#719\)](#)
 - Waiting on project to clear up trademark issues
- [OneNet Framework \(#112\)](#)
 - Working through naming and scope issues identified.
- [GridMind \(#750\)](#)
 - Picking up on LF Onboarding in September

Pre-proposal

- [ODINA](#): modules for fast grid calculations (TenneT)
- Project Satori: accelerate the global adoption of standard communication protocols (e.g. SunSpec Modbus, IEEE 2030.5, and EEBUS) (SunSpec Alliance)

TAC Chair/Vice Chair Election Update

We have one TAC Chair nominee:

- Antonello Monti

We have two TAC Vice Chair nominees:

- Nico Rikken
- Boris Dolley

ACTION: Approve nominees

Speakers from other LF projects on community building ([#350](#))

ACTION: Please add any speakers/topics to cover to the issue. If nothing by end of September, will close.

EU Cyber Resilience Act (CRA) [#895](#)

5:10 pm - 5:15 pm

OLFENERGY

What is the CRA?

The EU Cyber Resilience Act (CRA) (Regulation (EU) 2024/2847) establishes mandatory cybersecurity requirements for products with digital elements placed on the EU market. Organizations that develop, maintain, or distribute software with digital elements must ensure their products meet essential cybersecurity requirements throughout the product lifecycle.

- ➔ For more information on the CRA, LF Education has the following free course you can take for more information (<https://training.linuxfoundation.org/express-learning/understanding-the-eu-cyber-resilience-act-cra-lfel1001/>).

What does the CRA mean for my project?

On 11 September 2026, the EU Cyber Resilience Act (CRA) begins requiring **open source software stewards** to report actively exploited vulnerabilities and severe security incidents to EU authorities on tight deadlines (24 hours, 72 hours, and a final report).

The Linux Foundation is handling this for you. LF's project-hosting legal entities will act as the CRA stewards for the projects they host. They are registered on the EU reporting platform, they know the deadlines, and they file the regulatory reports. **Your project does not need to build its own EU CRA regulatory compliance function.**

What does my project need to do?

1. **Document whether your software is ultimately intended for commercial activities** (most widely-used LF open source software projects are). If your project does not publish software, the CRA is not relevant to your project.
2. **Add a short CRA stewardship statement to your SECURITY.md identifying the LF steward** (template on next slide). The LF legal steward is the “Legal Parent” listed in LFX PCC (see Operations->Project Definition->Legal Details - or ask at support@linuxfoundation.org)
3. **Know the escalation rule:** if you learn of an actively exploited vulnerability or a severe incident (for example, compromise of your release process), notify your LF steward's CRA contact immediately, while you fix the problem, never instead of fixing it. (more details on following slide)

Finding Legal Parent in LFX PCC

Stewardship Statement

Add to your [SECURITY.md](#) or similar public facing security document

CRA stewardship: This project is supported under the Linux Foundation CRA stewardship framework. Our project CRA steward is [Steward legal entity] and its policy is available at <https://www.linuxfoundation.org/security>. Security vulnerabilities should be reported through [project security reporting mechanism] which we will coordinate with our CRA steward. For actively exploited vulnerabilities or other security matters that may require CRA escalation, please use the project's security [emergency reporting mechanism] as appropriate.

Events where your project MUST notify the steward

Two categories of events can trigger CRA reporting by your steward (see table at right). If your project becomes aware of either, notify **all of the following simultaneously and promptly**: your steward's CRA contact and your project's own security channel.

When escalating, provide what you have: a description of the issue, reproduction steps, affected versions, any evidence of exploitation, and known mitigations. **Don't wait for complete information - the clock the steward faces starts at awareness.**

Event	What it means
Actively exploited vulnerability (AEV)	A vulnerability for which there is reliable evidence that a malicious actor has exploited it in a system without the owner's permission. Awareness often arrives from outside — a downstream vendor, a security researcher, or a government agency telling you your component is being exploited in the wild. That report itself triggers the escalation duty.
Severe incident	An incident that harms (or could harm) the confidentiality, integrity, availability, or authenticity of important data or functions, or that has led (or could lead) to malicious code in the product or in users' systems. Compromise of your release process resulting in malicious code in a release is the canonical example and must always be escalated.

OneNet Framework [#112](#)

5:15 pm - 5:30 pm

DLFENERGY

The background of the slide is a dark blue gradient with a complex network of thin, light blue lines connecting small circular nodes. The nodes are scattered across the frame, with some appearing brighter than others, creating a sense of depth and connectivity. The lines form a web-like structure that fills the entire background.

OneNet Data Space

LFE TAC Meeting – Sept 8th

Data Space and OneNet Concepts

Data Space

- Data Spaces offer to data driven Ecosystems a **secure, decentralized data sharing by design**. A dataspace allows the participants within the federated network to **maintain control over their data, boosting their sovereignty**.
- Unlike data integration over traditional centralized Data systems, a dataspace system does not have full control on its data and gradually integrates data as necessary.
- The actual goal of a data space is to provide base functionality over all data sources, regardless of how integrated they are, enhancing the functional and semantic interoperability across different platforms and industries, offering commercial and functional advantages among the participants.

Building Blocks

Data Privacy
and Security

Trust and security among Data Space participants

Data Storage
and Access
Control

Decentralized Storage and Secure Access/Usage Control

Interoperability
and Standards

Technical and Semantical interoperability for seamless data exchange

Integration and
Data Exchange

Federated Data Catalogue and end-to-end Data Exchange

OneNet Data Space: from technology to a sustainable ecosystem

ONE DATA SPACE, TWO COMPLEMENTARY BUILDING BLOCKS

Federation layer

Sovereign access to energy data, services and models across organizations

WHY LINUX FOUNDATION?

Turn a project asset into a trusted,
industry-wide open ecosystem

- 1 Neutral governance**
A trusted home where no single organization controls the project
- 2 IP clarity & trust**
Clear contribution and asset-management frameworks reduce uncertainty
- 3 Community & adoption**
Broader participation accelerates contributions, use cases and market uptake
- 4 Long-term sustainability**
Shared stewardship supports maintenance, evolution and commercial engagement

Strategic outcome: establish OneNet as a reusable open-source reference implementation for interoperable and sovereign energy data sharing.

Decentralized Data Space

The background of the slide is a dark blue gradient. Overlaid on this is a complex network of thin, light blue lines connecting numerous small, semi-transparent blue circular nodes. These nodes and lines are distributed across the entire frame, creating a sense of a global or interconnected network.

OneNet Middleware

OneNet Middleware in the Data Space ecosystem

The OneNet middleware: A scalable, unified platform for federated data, service and model sharing

OneNet Middleware development

OneNet Middleware development is based on European Dynamic's Web Application Generator platform **SOFIA**

SOFIA comprises of two sub-modules: The **Author Application** which is used to dynamically configure the presentation of the data, the menus, graphs, and user access and the **Web Application** which visualizes the data in various configurations and graphics. It is built on **JAVA Spring boot, Angular, Redis, MySQL** Databases and **Docker** technologies.

➔ **OneNet Connector API and Graphical User Interface**

The background of the slide is a dark blue gradient with a complex, abstract network of thin, light blue lines connecting numerous small, semi-transparent blue dots. These dots and lines are scattered across the entire frame, creating a sense of a global or digital network. The lines vary in opacity, with some appearing more solid and others more faint, adding depth to the network visualization.

TwinEU

OneNet Connector

The Data Space enabler

Starting Point: OneNet

Main Characteristics

- + FIWARE Context Broker fully integrated in the Connector Architecture
- + Additional Data Services (e.g., CIM Data Harmonization Tool)
- + Standardized Interfaces
- + Open GUI for facilitating the Connector usage

The energy context... Tailoring for Energy Domain

- + 10 services categories
- + 64 energy services
- + Vocabularies adoption

Current Version

- + Fully compliant with Data Space Protocol 2024-1
- + Open API and Data App (standardized interfaces for integrating legacy platforms and Middleware)
- + Graphical User Interface (GUI) for configuration and main functionalities

Data Space Protocol

The **Dataspace Protocol** is a set of specifications designed to facilitate interoperable data sharing between entities governed by usage control and based on Web technologies. These specifications define the schemas and protocols required for entities to publish data, negotiate Agreements, and access data as part of a federation of technical systems termed a Dataspace.

The Dataspace Protocol is used in the context of Dataspaces with the purpose to support **technical interoperability** across **Data Spaces**

Additional Features

- + **Integration of external services (Push Mechanism)**

- + Provide data to external service in a (near) real-time way, maintaining the features related to the Data Space

- + **Blockchain Transaction Notarization**

- + Logging and Certification of data transaction in an immutable and secure way

- + **New Standards (IEEE2030.5) and real-time communication protocols (NATS)**

- + Integration of new standards and protocols for a wider support

OneNet Ecosystem

- The project **TwinEU** is coming soon to an end but the work will continue in other EU projects
- An important asset is the development of the **INSIEME** project that is moving the Common European Energy Data Space **CEEDS** from the research environment to the industrial application
- The EU Commission is also driving a **standardization Task Force** for data protocols and exchanges where the OneNet connector is supposed to play a key role
- **ENG** is the **Sector Orchestrator** for **Energy Domain** in **Data Spaces Support Centre 2 (DSSC2 2026-2029)**.
 - This initiative focusses on **concreteness** and **maturity for market sustainability** on respect of DSSC that has been focused on the creation of technological blueprints, interoperability standards and governance guidelines
 - It is planned to have **OneNet Maturity Assessment** and participate to the second round of **European DataSpace Awards**
- These development should bring in the close future **more participant to the Community**

Thank you!

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement N°101136119

TwinEU

Annual Review: OperatorFabric [#585](#)

5:30 pm - 5:45 pm

QLFENERGY

Annual Review for OperatorFabric (08/09/2026)

Frédéric DIDIER

Rte

OperatorFabric - Recalls

Brief Description: OperatorFabric is a modular, extensible, industrial-strength platform for use in electricity or other utility operations.

It aims to facilitate operational activities for utilities in two ways :

- Centralize real time business events in a single place to avoid having multiple screens/software.
- Facilitate interactions between operational control centers

Current stage: Early Adoption and we are not aiming for the Graduated stage for this review.

Contributed by: RTE

TSC Chairperson:

Frédéric Didier

TSC Members and Affiliations:

- Frédéric Didier (RTE)
- Frédéric Kruszyna (RTE)
- Clément Bouvier (RTE)
- Valérie Longa (RTE)
- Floris van der Meulen (Alliander)
- Guillaume Trimbach (RTE)

Contributions

Commits over the last year of **opfab/operatorfabric-core**

Key Achievements in the past year

- Enhancement of custom screens
- Enhancement of email features
- Enhancement of administration features

Focus for the coming year

No new features are planned; activity is limited to bug fixes, minor improvements, and dependency upgrades (particularly for cybersecurity reasons)

Annual Review: Battery Data Alliance [#57](#)

5:45 pm - 6:00 pm

DLFENERGY

Annual Review for Battery Data Alliance

Gabe Hege
September 8th 2026

Description

The LF Energy Battery Data Alliance (BDA) was created to bring battery companies together to work jointly to unify how batteries are handled in terms of software. Battery data is core to creating a decarbonized economy and power systems, yet companies waste tremendous amounts of time implementing battery data schemas, integrations/conversions, typical calculations, etc.

BDA believes that an open source tool should exist to enable researchers and engineers to focus on bringing more innovative solutions to market rather than each organization duplicating the same work.

Incubation Project review criteria

Incubation: criteria met

- ✓ OpenSSF Best Practices badge, Passing (100%)
 - ✓ READMEs welcoming contributors, every active repo
 - ✓ GOVERNANCE + COMMITTERS + CODEOWNERS
 - ✓ Architecture documentation
 - ✓ 12-month roadmap incl. what BDF will not do
 - ✓ Community growth plan
 - ✓ LFX Insights: 5 contributors, 4 organizations
 - ☐ TSC roster confirmed in LFX PCC (in progress)
- *Requesting advancement to Incubation at this review*

Early Adoption: criteria not yet met

- ☐ TSC of 5+ with elected chair, open meetings (today: 4)
- ☐ 2+ documented production users
candidates: Arbin MITS export, Corvus pipeline, PyBOP, SINTEF
- ☐ OpenSSF badge at Silver level
- ☐ Full 18-month plan (outline written in GROWTH.md)
- ☐ Sustained contributor growth trajectory
→ *Tracked publicly: battery-data-format #113 / #114*

Contributions*

Organizations contributing and/or using in production*

Key Achievements in the past year

- [Microsoft Donated dataset in BDF](#)
- [Arbin MITS 11.7.0](#) exports BDF
- [PyProBE](#) natively supports BDF
- BDF v0.1.0. [v0.2.0](#) (CLI & Library)
- Battery2030+ using BDF as foundation for battery genome, metadata on datasets & actual data
- 3TB of timeseries data published in BDF, launched at Digibatt Symposium
- 18k+ downloads of bdf datasets

DigiBatt Symposium at Soria Moria in Oslo, Norway

Areas the project could use help on

- Support dataset storage with metadata
 - We expect more dataset contributions in BDF than code contributions to BDF
 - (nice to have) Data Metrics / reporting to LFX.
- Assistance in publicizing BDF 1.0 when ready (eta October '26)
- Continued support from larger tech companies, but we will need larger battery or energy businesses to support

Feedback on working with LF Energy

The neutral home works. Microsoft, Amazon, Arbin, Corvus, SINTEF, Empa, Faraday Institute can work together on pre-competitive work & research.
