

Annual Review for Battery Data Alliance

Gabe Hege
September 8th 2026

QLFENERGY

Description

The LF Energy Battery Data Alliance (BDA) was created to bring battery companies together to work jointly to unify how batteries are handled in terms of software. Battery data is core to creating a decarbonized economy and power systems, yet companies waste tremendous amounts of time implementing battery data schemas, integrations/conversions, typical calculations, etc.

BDA believes that an open source tool should exist to enable researchers and engineers to focus on bringing more innovative solutions to market rather than each organization duplicating the same work.

Incubation Project review criteria

Incubation: criteria met

- ✓ OpenSSF Best Practices badge, Passing (100%)
 - ✓ READMEs welcoming contributors, every active repo
 - ✓ GOVERNANCE + COMMITTERS + CODEOWNERS
 - ✓ Architecture documentation
 - ✓ 12-month roadmap incl. what BDF will not do
 - ✓ Community growth plan
 - ✓ LFX Insights: 5 contributors, 4 organizations
 - ❑ TSC roster confirmed in LFX PCC (in progress)
- *Requesting advancement to Incubation at this review*

Early Adoption: criteria not yet met

- ❑ TSC of 5+ with elected chair, open meetings (today: 4)
 - ❑ 2+ documented production users
candidates: Arbin MITS export, Corvus pipeline, PyBOP, SINTEF
 - ❑ OpenSSF badge at Silver level
 - ❑ Full 18-month plan (outline written in GROWTH.md)
 - ❑ Sustained contributor growth trajectory
- *Tracked publicly: battery-data-format #113 / #114*

Contributions*

Organizations contributing and/or using in production*

Key Achievements in the past year

- [Microsoft Donated dataset in BDF](#)
- [Arbin MITS 11.7.0](#) exports BDF
- [PyProBE](#) natively supports BDF
- BDF v0.1.0. [v0.2.0](#) (CLI & Library)
- Battery2030+ using BDF as foundation for battery genome, metadata on datasets & actual data
- 3TB of timeseries data published in BDF, launched at Digibatt Symposium
- 18k+ downloads of bdf datasets

DigiBatt Symposium at Soria Moria in Oslo, Norway

Areas the project could use help on

- Support dataset storage with metadata
 - We expect more dataset contributions in BDF than code contributions to BDF
 - (nice to have) Data Metrics / reporting to LFX.
- Assistance in publicizing BDF 1.0 when ready (eta October '26)
- Continued support from larger tech companies, but we will need larger battery or energy businesses to support

Feedback on working with LF Energy

The neutral home works. Microsoft, Amazon, Arbin, Corvus, SINTEF, Empa, Faraday Institute can work together on pre-competitive work & research.
